FACULTY: Ma’am Asima Faisal
Course: Introduction to Health management
OBJECTIVES

- Define first aid
- Identify importance of first aid in targeted school
- Explain the purpose of the training.
- Discuss project details
- Identify methods of training
- Analyze impact of training provision.
- Conclusion
We are cordially thankful to our institution “Institution of Business Management” for providing the platform and ignite to serve for community. These steps pave our way for future endeavors. Special thanks to our faculty Dr. Asima Faisal for her motivation and thought provoking idea.
First aid is the assistance given to a person suffering from sudden illness or injury, with care provided to preserve life, prevent the condition from worsening, or to promote recovery. This emergency response alleviate complications and improve quality of door to hospital care.
The school targeted for training was having high risk of harm to students and staff. A visit of school was done by our team and it revealed poor infrastructure, unhygienic conditions. Two cases were identified during visit:

- Expiry of a faculty member
- Expiry of a student
AIM OF TRAINING SESSION

The First Aid training aim to provide essential skills to students, teachers and management to ensure risk assessment and reduce the harm by providing emergency care and mobilization to hospital
TRAINED TEACHERS

STUDENTS FIRST AID TEAM
TRAINING METHODOLOGY

PRE-TEST

POST TEST

TEACHING AND TRAINING
We conducted a verbal quiz assessing their understanding related to first aid, its importance and indications. It revealed that few of them were aware of “IbetedaaiTibiiImadad-First aid” only. However majority weren’t aware of this concept.
TEACHING

Basic concepts were delivered through Multimedia presentation

TRAINING

Separate training for boys and girls
Demonstration of skills and techniques
Scenario building
LIST OF EMERGENCY SITUATIONS DISCUSSED

- Internal and external bleeding
- Fainting
- Injuries to bones and joints (Fractures, sprain, dislocations)
- Head and spine Injuries
- Care of burn
- Care of Chocking
POST-TEST

- All the queries were dealt right away and students were encouraged to participate.
- By the end of session scenarios were given and children were asked to act in scenarios and manage victim.
- Victim lifting, transferring, Bandage application and other skills were re-demonstrated by them.
The overall impact generated through the course was “First aid provider’s team” was initiated in this under privileged school. The school was equipped with First aid box for emergency conditions. Contact numbers were given to management for reference for future assistance and sessions.
First Aid training is very essential because it gives the immediate assistance to the victim and it may save the precious life. Without proper action at proper time, danger awaits us with a bigger face. The aim of training focused on how the individual manage every day minor accident.

“First Aid doesn’t just assist recovery, it helps save lives”
